

Micro

& Super Micro Pocketed Innersprings

Imagery, non-woven colours, and listed specifications are non-contractual and subject to change without notice.

Micro & Super Micro coils flex and respond to all body shapes and reduced partner disturbance.

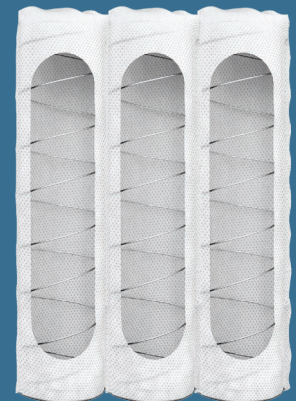

High resolution, high degree of comfort.

Narrow-diameter Micro and ultra-narrow-diameter Super Micro pocketed innersprings are a great way to increase unit resolution and overall surface coverage. Their fine wire structure improves performance by providing superior comfort and maximising support.

The small diameter coils respond to the individual contours of the body, offering individualized support and reducing pressure. Each coil can respond independently to reduce disturbance, and that fine wire technology continues to enhance comfort by flexing and responding to all body weights and every sleep position.

- Responsive support that provides comfort to any sleeper
- High-quality wire from our vertically integrated wire-drawing process
- Innersprings sleep up to **28% cooler** than foam*

Narrow-diameter coils offer increased surface coverage and **greater comfort resolution.**

An industry leader bringing you a new industry standard.

Leggett & Platt is a diversified manufacturer (and member of the S&P 500) that conceives, designs and produces a broad variety of engineering components and products for the bedding industry and other market sectors worldwide.
