

# Solace™

Progressive pocket springs

Imagery, non-woven colours, and listed specifications are non-contractual and subject to change without notice.

Stress-relieved wire holds its shape and creates a durable, consistent sleep surface.

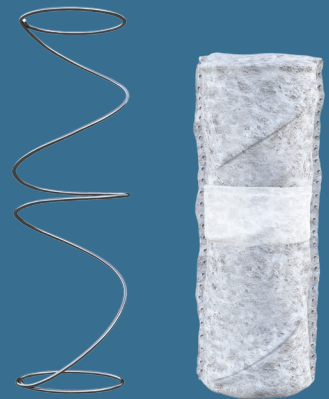

## Responsive comfort, lasting support.

Innovative design and variable-rate geometry give **Solace™** pocketed innersprings their distinctive look and performance. Their progressive design provides an immediate feeling of comfort, followed by responsive and lasting support. They react to different body weights, shapes, and sleep patterns, providing an individualized feel that keeps you supported.

Designed to resist coil-nesting – Solace units retain their uniformity, and Solace springs move independently of each other to provide targeted comfort and support. This unique set of attributes gives Solace a highly individual appearance and a difference in performance you can feel.

- Premium-quality innersprings with a singular, responsive design
- Pocketed innersprings help reduce partner disturbance and roll-together
- High-quality wire from our vertically integrated wire-drawing process
- Innersprings sleep up to **28% cooler** than foam\*

Progressive design and exclusive geometry give **Solace™** its distinctive look and performance.

### An industry leader bringing you a new industry standard.

Leggett & Platt is a diversified manufacturer (and member of the S&P 500) that conceives, designs and produces a broad variety of engineering components and products for the bedding industry and other market sectors worldwide.
