Leggett & Platt’s foam-encased innerspring systems are the perfect way to keep costs down while growing your profits. This system combines innerspring and foam delivery, reducing transportation, warehousing, and inventory costs.

These roll-packed, foam-encased innersprings reduce product and material handling, manufacturing costs, and administration requirements. They’re fully interchangeable with polyurethane foam and latex block systems, allowing market penetration opportunities, and they incorporate all the comfort and support characteristics of the chosen innerspring system.

- More efficient than conventional delivery, preparation, and assembly
- Reduced mattress core production and storage needs
- High-quality wire from our vertically integrated wire-drawing process
- Innersprings sleep up to 28% cooler than foam*
