

Ekko® next-generation, high-performance innersprings have been designed and engineered to deliver. All the turns of this unique spring are active, meaning the full length of wire is contributing to performance and delivering support.

- **Innovative Design** – Next-generation innersprings with a distinctive, re-engineered, fully active design.
- **Optimised Performance** – One of the most effective pocket springs on the market in terms of measured firmness in relation to raw material content.
- **Sustainable** – Resilient, lighter in weight, and easier to handle, offering reduced environmental impact and improved sustainability.
- **Stress-Relieved Wire** – Holds its shape and provides greater durability and performance consistency.
- **Packable and Shippable** – Can be compressed, folded, and rolled.

Ekko® high-performance pocket springs
