

LFK open-end offset innersprings are responsive, consistently even, and untapered, offering firm edge-to-edge support with improved stability.

- **Offset Profile** – Ensures each coil is securely attached to the helical and its neighbouring coils.
- **Superior Durability** – Creates a durable, long-lasting sleep surface that springs back to its original shape after use.
- **Increased Coil Counts** – Smaller coil diameter creates more surface coverage and boosts coil counts while conforming to the curves of the body.
- **Stress-Relieved Wire** – Holds its shape and creates a more durable and consistent innerspring.
- **Quality Steel** – Leggett & Platt draws its own wire to ensure quality-controlled steel in every coil.
