

Superlastic® continuous-coil innerspring systems use high-tensile steel wire to produce coils with no knots or sharp bends, generating greater surface coverage with built-in durability.

- **Innovative Design** – E-shaped coil-head design covers more surface area for improved filling material support and longer comfort life.
- **Responsive Support** – Special interconnected rows of continuous springs optimise durability and body support while eliminating side-sway and roll-together.
- **Stress-Relieved Wire** – Holds its shape and creates a more durable and consistent innerspring.
- **Quality Steel** – Leggett & Platt draws its own wire to ensure quality-controlled steel in every coil.

Superlastic® continuous-coil innersprings
