

Imagery, non-woven colours, and listed specifications are non-contractual and subject to change without notice.

Designed to outperform standard spring comfort layers and lasts longer than foam.

Comfort, performance, and durability.

Softech[®] Micro premium performance layers, our latest innovation in low-profile, ultra-high-resolution micro-pocket innerspring technology, refines comfort and provides reassuring support that won't slip, settle, or slide. With its low height, high spring count, and high comfort level – in a spring unit rather than simple sheet of coils – Softech Micro outperforms its rivals and delivers a responsive feel that's built to last.

Utilizing high-quality wire from our vertically integrated wire-drawing process and optimum pre-tension perfected through Fine Wire Technology, Softech Micro has a level of performance and support not found in other micro-pocket units or more traditional filling materials. Combined with the resiliency that only comes from heat-treated low-diameter wire, sleepers will experience long-term consistency and support in addition to new levels of comfort.

- Perfect for mattress toppers, multi-layer, and filling layer applications
- Designed specifically to resist sagging and settlement
- Highly resilient: heat-treated, side-welded, and side-glued
- Innersprings sleep up to **28% cooler** than foam*

Low-profile – 25 mm or 30 mm spring heights
High-resolution – 613/736 or 1380 springs per m²
Long-lasting – stress-relieved & pre-tensioned
