Designed to outperform and **last longer** than more traditional filling materials.

Responsive, versatile, and diverse.

In its continuous endeavour to provide bedding innovations and the most comfortable sleep surface possible, Leggett & Platt introduces **Softech®**, the smart pocket spring with various applications such as mattress toppers, layers, and filling replacement. Made from high-tensile stress-relieved wire for lasting resiliency, these spring comfort layers consistently outperform expensive foams and other synthetic filling materials, offering cooler sleep, reduced settlement, and an extremely comfortable feel.

Manufacturing ingenuity and Fine Wire Technology allow Softech to be produced in a variety of spring unit resolutions and heights from **60 mm to as low as 27 mm** – all delivering the same reassuring performance characteristics and enduring support not found in other systems.

- Boost coil resolution and refine comfort with a layer of pocket springs
- Designed to resist sagging and settlement, and reduce partner disturbance
- Heat-treated, side-welded, and side-glued for lasting resiliency
- Innersprings sleep up to **28% cooler** than foam*

Countless configuration and application options, which result in opportunities to expand your product range.

An industry leader bringing you a new industry standard.

Leggett & Platt is a diversified manufacturer (and member of the S&P 500) that conceives, designs, and produces a broad variety of engineering components and products for the bedding industry and other market sectors worldwide.
