

VERTINOVA®

NEXT-GENERATION OPEN-COIL INNERSPRINGS

Imagery and listed specifications are noncontractual and subject to change without notice.

Setting a new open-coil standard.

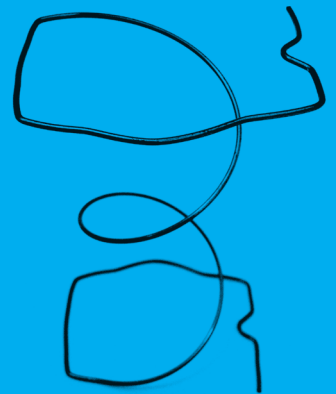

Delivering optimized support across the entire innerspring unit due to its unique set of physical and performance attributes, Leggett & Platt's VertiNova® will redefine open-coil standards. Engineered with a higher resolution in mind, VertiNova provides a more consistent and stable sleep surface – with improved coverage and support all the way to the edge.

Exclusive, effective, and visually distinctive, VertiNova's patented design results in an innerspring unit that is responsive and adapts to changes in body weight without leaning or losing support, and our super-strong stress-relieved wire, controlled by our own process, helps prevent mattress sagging and settlement, ensuring a long-lasting, supportive feel.

- Heat-treated and tested for performance, quality, and durability
- Roll-pack compatible for efficient shipping and delivery
- High-quality wire from our vertically integrated wire-drawing process
- Innersprings sleep up to **28% cooler** than foam*

36% more coils for greater surface coverage**

Alternating offset coils evenly distribute weight and neutralize force to deliver improved consistency and product performance.

An industry leader bringing you a new industry standard.

Leggett & Platt is a diversified manufacturer (and member of the S&P 500) that conceives, designs, and produces a broad variety of engineering components and products for the bedding industry and other market sectors worldwide.
