

Pocket

Standard & Compact Pocketed Innersprings

Imagery, non-woven colours, and listed specifications are non-contractual and subject to change without notice.

Stress-relieved wire holds its shape and creates a durable, consistent sleep surface.

Responsive comfort, essential support.

Our Standard and higher-resolution Compact pocketed innersprings are comfortable, contouring, and durable. These individually pocketed coils isolate motion transfer to help minimize partner disturbance. Additionally, each coil flexes and moves independently to maximise performance and deliver support where it's needed without compromising on comfort!

Highly responsive to even the smallest changes in weight distribution, body shape, and sleeping patterns, these high-quality components will give your customers comfortable, supportive, restful sleep night after night.

- Responsive support that provides comfort for each sleeper
- Heat-treated and tested for performance, quality, and durability
- High-quality wire from our vertically integrated wire-drawing process
- Innersprings sleep up to **28% cooler** than foam*

Individually pocketed coils conform to the contours of the body for superior comfort and **reduced partner disturbance**.

An industry leader bringing you a new industry standard.

Leggett & Platt is a diversified manufacturer (and member of the S&P 500) that conceives, designs and produces a broad variety of engineering components and products for the bedding industry and other market sectors worldwide.
